

Getting Started

Create a new folder on your desktop..

copy the following files to the new folder:

Write.scad
BlackRose.dxf
braille.dxf
knewave.dxf
Letters.dxf
orbitron.dxf

Start openscad
click file.. save..

Find the new folder you created on your desktop and save your blank openscad file..

Your working folder (the new one you created on the desktop) will now contain write.scad, the dxf files (fonts) and your new project.

Now lets create an example.

The use<Write.scad> tells openscad to use the routines in the write.scad file with the project you are working on..
